

Nishadi Samarathunge

TypeScript | React & Next.js | Health Tech

Full-Stack Developer experienced in building responsive and user-focused web applications with React, TypeScript, Next.js, Node.js and cloud-based services. Skilled in frontend development, API integration, databases and deployment using tools such as Supabase, Vercel, Netlify and AWS. With a background in healthcare and wellness, I bring strong communication skills, empathy and product thinking to software development. I learn quickly, enjoy solving problems and adapt easily to new technologies and team environments.

SOFT SKILLS

Analytical Problem-Solving

Structured Documentation

Cross-Functional Collaboration

Quality-Focused Delivery

Ownership & Accountability

Patient-Centred Mindset

Adaptability

Fast learning

TECHNICAL SKILLS

Frontend: React, NextJS, TypeScript, JavaScript ES6+, HTML5, CSS3, Responsive design, Accessibility

Backend Node.js, REST APIs, API integration, secure API design, Entity Framework awareness

Cloud & DevOp AWS Lambda, API Gateway, S3, CloudFront, CloudWatch, AWS AI

Databases PostgreSQL, Supabase, MySQL, MongoDB, SQL Server

Tools: Git, Git flows, Docker, Figma, documentation, reusable components, SOLID principles, Umbraco

Testing Jest, Playwright, unit testing, integration testing, E2E testing

WORK EXPERIENCE

Full-Stack Engineer

Freelance

11/2025 - Present

Copenhagen

- Built responsive web applications and client-facing features using React, TypeScript, HTML5, CSS3, responsive design and mobile optimisation, delivering 2+ client-facing web projects with clear user flows and maintainable components.
- Delivered end-to-end website improvements from requirements clarification to implementation, testing and structured documentation, improving delivery consistency and reducing rework across 2+ projects.
- Customised and extended 3 CMS-based platforms, including Umbraco, by configuring client-specific content, functionality and reusable structures, improving maintainability and reducing manual content update effort for clients.
- Collaborated with stakeholders using strong communication skills, ownership and accountability, while applying SOLID principles, design patterns, access control and encryption awareness to support high-quality, reliable and maintainable delivery.

Founder & Web Developer

AyurGlow

01/2025 - Present

Copenhagen

- Built and maintained a wellness business website with custom functionality, focusing on user experience, design, performance and iterative improvement.
- Combined healthcare knowledge, product thinking and web development to communicate wellness services clearly and responsibly to users.
- Managed end-to-end product decisions, content structure, customer-facing communication and website improvements as both founder and developer.
- Applied a patient-centred healthcare perspective to digital product decisions, supporting clear, trustworthy and meaningful communication for users interested in health and wellness services.

WORK EXPERIENCE

Hospitality Assistant (Part-time)

Talent Garden Copenhagen

09/2022 - Present

Copenhagen

Tech Co-working space

- Support daily operations in an international tech co-working space for 3+ years, strengthening communication, ownership, collaboration and service-minded problem solving.

Full Stack Developer

Planet Peanut

07/2024 - 12/2024

Copenhagen

- Developed Web / Frontend Development features using React, NextJS, TypeScript, HTML5 semantics, CSS3, responsive design and mobile optimisation in an agile team environment, translating Figma designs into reusable UI components.
- Collaborated with frontend, backend, design and product stakeholders to deliver scalable features, improving application performance by 15% while supporting automated tests, bug fixing, code reviews, documentation and high-quality delivery.

RELEVANT PROJECTS

Monthly Planner App (2026)

- Migrated a vanilla JavaScript planner into a Next.js and TypeScript application with task CRUD, filters, localStorage persistence and offline support.
- Designed typed data models and maintainable frontend architecture for task management and user workflows.
- Added automated testing across 3 levels-unit, integration and E2E-covering 5+ critical user flows, including task creation, editing, filtering, persistence and offline behaviour.
- Tested key production flows including data persistence, legacy migration and offline behaviour.
- Focused on clean, testable and maintainable code with responsive UI and CI-ready project structure.

AI Kitchen Assistant / FAQ Canteen (2025 - Present)

- Developed an AI-powered kitchen assistant chatbot that answers user questions about weekly menus, allergens and food options.
- Built and deployed a cost-efficient serverless AWS architecture using Lambda, API Gateway, S3, CloudFront and AWS Bedrock.
- Improved accuracy and reliability by combining AI responses with rule-based logic, while debugging API errors, IAM permissions and Lambda performance issues.

EDUCATION

HackYourFuture

Full-stack development

08/2023 - 05/2024

University of Kelaniya

Bachelor of Ayurveda Medicine and Surgery

2013 - 2018

VOLUNTEER EXPERIENCE

Mentor (Full-stack development)

Hack Your Future

08/2024 - Present

- Gained stronger technical communication, patience, documentation habits and the ability to break complex engineering topics into understandable steps for diverse learners.

Volunteer

CPH developer festival and Tech BBQ

2023 - 2025

- Supported tech community events, strengthening networking, teamwork and comfort working in fast-paced international environments.
